

Vertex IsoLink in Action

Proven shock reduction • Fast, cost-effective service

The results are in. After 1000+ hours of total testing and run data collection, Vertex is thrilled to report excellent results! Implementing the **IsoLink** into the tool string consistently shows a reduction in destructive axial shock & vibration. This results in smooth downhole performance, accurate reporting, and extended life for vital equipment.

The **IsoLink** is engineered to operate cost-effectively, be easy to use, & be reliable. IsoLink is built to excel in harsh drilling conditions, where durability & seamless operations are an imperative.

During a recent well, the **IsoLink** logged 175+ hours, traversing multiple curve sections, lateral sections and numerous formations, covering a total distance of 16,500 ft. Throughout the run, the **IsoLink** enabled stable MWD performance, mitigating tool damage from shock & vibration.

Post-run teardown & service can be performed quickly & cost effectively!

Minimal downtime → Minimal cost!
